PROJECT

Stock Management System

Technologies Used: Spring Boot, Java, Angular, MySQL, Spring Security

Description: The Stock Management System is a web-based application developed using Spring Boot. The primary aim of this project is to create a Stock Management System that centralizes all information regarding the stock of an organization. This application maintains stock records for both the purchase and sales of products. It features an admin component for managing and maintaining the stock system effectively. This web application facilitates the management of stock for an organization, including the organization profile, sales details, purchase details, and the current stock levels. The system provides a user-friendly interface for administrators to view, add, update, and delete stock records.

Real Estate Web Scraping

Technologies Used: UiPath, MySQL

Description: The project Real Estate Web Scraping is used get the various data from website by using data scraping tool get data like Price, Sq. Ft, Address, etc. Data which is scraped from website are stored in Excel Sheet. By using this scraping tool, we can more data from a website and show it as excel output.
